

ENERGY POLICY

As a leading chemical company, Arkema is committed to Sustainable Development across its activities, with a particular focus on reducing its environmental footprint and improving its energy efficiency. Accordingly, the Group has raised its energy efficiency improvement target to 25% between 2012 and 2030, in line with its new climate commitment to reduce its Scope 1 and 2 greenhouse gas (GHG) emissions and its Scope 3 emissions by 46% by 2030 compared with 2019.

To achieve this objective, the Group has decided to strengthen the ARKEMA ENERGY program initiated in 2012 and rolled out across all its operations, by drawing on a global network of correspondents.

The program, which also helps boost the competitiveness of the Group's industrial sites, meets the following requirements:

- Compliance with applicable laws and regulations on energy efficiency.
- Implementation of an Energy Management system enabling a sustainable improvement in energy performance and the leveraging of best practices.
- Continuous drive to optimize energy costs, from the design and purchase of equipment to the day-to-day operation of the plants, including the negotiation of energy procurement.
- Search for low-carbon energy sources through long-term commitments to purchase electricity or steam from renewable sources, or to use alternative fuels.

This policy relies on the commitment of all Arkema employees, and aligns fully with the Group's drive for operational excellence.
